## 平板硫化机组 Multi-daylight Unit Press

平板硫化机组是国内自动化水平较高，结构紧凑、可硫化大型输送带的机组。适应于硫化普通橡胶输送带、尼龙输送带、钢丝绳输送带和阻燃输送带。主机均采用框式结构，热板及柱塞均选用优质材料，加工精密，不易腐蚀磨损，维修方便，工作压力稳定和调节方便。控制系统采用PLC控制，硫化过程可实现多程序自动控制，如可自动检测和调节热板温度，提高了平板硫化机组控制水平，降低了劳动强度，提高了生产效率。

The Multi-unit Press is of higher automation level and compact structure, suitable for vulcanizing conveyor belt such as textile conveyor belt, steel cord conveyor belt, rubber plate and etc.

The main machine is applied for modern frame structure. The platens and ram are all made of superior material. They are accurately processed and have high wear-resistance. The features are as follows: convenient maintenance, constant working pressure and easy-adjusting. The control system has been taken up with PLC so as to realize multi program automatic control of curing process, for example, The temperature of platens can be measured and regulated automatically. This will improve the control level and provide with high efficiency of production and low intensity of labor.
